

## HydroClear® Glass Talk

Cardinal HydroClear® is a coated glass product that provides permanent protection against surface corrosion caused by the continuous exposure of glass to water, heat, and high humidity - conditions prevalent in bathrooms, indoor pools and spas, saunas, and sunrooms.

Corroded glass is irreparable and characterized by a dull, hazy, and dirty appearance that worsens the longer it's exposed to a corrosive environment.

To eliminate the potential for surface corrosion, HydroClear features an invisible, highly durable, and permanent protective coating that is fused to the glass surface to provide lifetime corrosion protection.

Unlike after-market products that must be periodically reapplied and often affect glass clarity, HydroClear is a permanent solution that maintains a crystal-clear appearance, and requires no additional maintenance beyond ordinary cleaning.
